## WHAT IS CLAIMED IS:

- 1. A rotating mechanical seal comprising: a sliding ring (5) being attached to a shaft (1) by an O-ring (6), the sliding ring rotating with the shaft (1); and a non-rotating backing ring (4) which is attached by way of an O-ring (3) to a housing (2) of a compressor so as to be gas-tight, wherein the sliding ring (5) and backing ring (4) are pressed one against the other by way of a spring (8) to form a seal and slide one upon the other, and wherein one of the rings (4, 5) is made of a carbon and silicon carbide composite material and the other of a silicon carbide material.
- 2. The seal according to Claim 1, wherein the carbon and silicon carbide composite material exhibits a structure which is obtained by partial conversion of the surface layer of the carbon substrate into a silicon carbide material.
- 3. The seal according to Claim 1, wherein the surface of the carbon and silicon carbide composite material has a carbon content from 40% to 85% and a silicon conversion ratio of from 60% to 15%.
- 4. The seal according to Claim 2, wherein the surface of the carbon and silicon carbide composite material has a carbon content from 40% to 85% and a silicon conversion ratio of from 60% to 15%.
- 5. The seal according to Claim 1, wherein the silicon carbide material exhibits individual, non-contiguous pores of a mean pore size of not greater than 60  $\mu$ m at porosity of from 2% to 15%.
- 6. The seal according to Claim 2, wherein the silicon carbide

The second secon

material exhibits individual, non-contiguous pores of a mean pore size of not greater than 60  $\mu m$  at porosity of from 2% to 15%.

- 7. The seal according to Claim 3, wherein the silicon carbide material exhibits individual, non-contiguous pores of a mean pore size of not greater than 60  $\mu$ m at porosity of from 2% to 15%.
- 8. The seal according to Claim 4, wherein the silicon carbide material exhibits individual, non-contiguous pores of a mean pore size of not greater than 60  $\mu$ m at porosity of from 2% to 15%.
- 9. The seal according to Claim 1, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness ( $R_a$ ), with the pores being excepted.
- 10. The seal according to Claim 2, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness ( $R_a$ ), with the pores being excepted.
- 11. The seal according to Claim 3, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to

0.03  $\mu\text{m},$  expressed as mean arithmetic roughness  $(R_a),$  with the pores being excepted.

- 12. The seal according to Claim 4, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness (R<sub>a</sub>), with the pores being excepted.
- 13. The seal according to Claim 5, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness (R<sub>a</sub>), with the pores being excepted.
- 14. The seal according to Claim 6, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness ( $R_a$ ), with the pores being excepted.
- 15. The seal according to Claim 7, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness (R<sub>a</sub>), with the pores being excepted.

16. The seal according to Claim 8, wherein the carbon and silicon carbide composite material exhibits sealing surface properties with a roughness value of from 0.005 to 0.07  $\mu m$  and the silicon carbide material exhibits sealing surface properties with a roughness value from 0.002 to 0.03  $\mu m$ , expressed as mean arithmetic roughness ( $R_a$ ), with the pores being excepted.
